

# Beizband

Pickling welds without waste water

- for TIG/MMA/MIG and MAG welds
- no waste water
- 25 m long

## Product description

A pickling tape for removing tarnish **without** water.

Effective even at low temperatures.

Just as efficient as pickling pastes, but does **NOT** require the certificate for the purchase of toxic substances.

## Application

This pickling tape is soaked with a pickling liquid. The tape is placed on the weld seam and pressed on with an acid-proof roller. After approx. 30 minutes, the pickling tape is removed and the weld seam is neutralized with the neutralization cloth. The stainless steel is now free of ferrites and can form a passive layer. The pickling tape was developed for assembly, as no waste water is produced during application.
