

REMBA Finishöl

Sealing of smooth surfaces

- Protects smooth surfaces from soiling
- For stainless steel, aluminum and plastics
- Especially for highly polished stainless steel
- Seawater resistant
- Water-repellent effect

Product description

REMBA Finishing Oil forms a water-repellent film on the surface of metals and plastics. This protects these surfaces from soiling. This is particularly important for stainless steel to prevent corrosion caused by road salt and other environmental influences.

Application

First clean the soiled surface with REMBA Neutral Cleaner.

Then apply a thin layer of REMBA Finishing Oil and spread evenly with a soft cloth.

Treated surfaces become dirt-repellent and look like new.
